LEPIDEauditor enables database administrators and developers to continuously monitor all changes that take place in their databases in real-time. The software makes it possible to view all data changes in various servers, highlight the changes and find out those that have the biggest impact on the database. The application also offers the ability to analyze database activities – which statements are executed, how much time is spent and how much CPU is consumed. LepideAuditor supports DBMSs from Microsoft, Oracle and PostgreSQL. It also has a built-in update history feature, which allows you to view all changes that took place to a database since its creation. To view the detailed history, you need to pay additional premium for the feature. Zabbix Agent for MongoDB is an add-on which will display and manage MongoDB Zabbix sensors. Its purpose is to provide monitoring, alerting, incident detection and problem analysis on MongoDB servers in the enterprise. Videocap software is the best player in the game. It is the best-in-class player in the field of sports video player software. Videocap is the complete solution for the player's needs, and in addition to providing advanced player programs, the software also offers videocap camera SDKs and network APIs. Videocap not only helps you meet the video player application development challenges, but also makes your application development process faster and more manageable. Zabbix Agent for MySQL is an add-on which will display and manage MySQL Zabbix sensors. Its purpose is to provide monitoring, alerting, incident detection and problem analysis on MySQL servers in the enterprise. Zabbix agent for Nginx is an add-on which will display and manage Nginx Zabbix sensors. Its purpose is to provide monitoring, alerting, incident detection and problem analysis on Nginx servers in the enterprise. Zabbix Agent for Nginx is an excellent web server monitoring solution for Nginx, a web server, which makes monitoring of any website more flexible, efficient and easier. The application is designed to monitor your business intelligence tools. You can also verify high-level analysis of your DW reports on a monthly basis with no additional setup or configuration required. The application comes with the necessary databases and database structures for high-level analysis of your business intelligence applications. It is designed to alert you to potential problems or system issues. Component Monitor for SQL Server is a

LepideAuditor is a comprehensive application designed to help you monitor your SQL Server databases and their activities. It enables you to view and analyze all the changes and activities that take place in any registered server. The application is worth having when you want to view various server alerts, keep a record of server activities and ensure security of your organization's sensitive data. The application is designed to be used by database administrators and SQL Server professionals. This application is built on top of the same tools that are used by the Application Management team, including SQL Server Performance Dashboard, SQL Server Connection Monitoring, SQL Server Event Monitoring. The entire SQL Server database monitoring process is organized in a single database and can be easily accessed using LepideAuditor through our graphical user interface. The application gives you a complete and understandable overview of the server administration environment, enabling you to know the status and operation of all your databases. You can set up alerts to be triggered when database activity exceeds certain thresholds or repeatedly takes place. New information is added right to the interface, making LepideAuditor particularly easy to learn and use. LepideAuditor enables you to track any change or activity that takes place on the server in a database and report on it. LepideAuditor is designed for easy maintenance. You have the option to configure your reports right from the main interface, without having to go into the database. You can also use the application's built-in Search functionality to quickly find information. LepideAuditor includes a clean and professional interface that is designed for easy use. The application does not interfere with your ability to work. LepideAuditor can be installed in all version of Microsoft Windows. All versions of MS SQL Server and the latest versions of MSSQL are supported. If you are an existing user of LepideAuditor, there is no need to buy the new version. You can continue using the old version without any compatibility problems. LepideAuditor Client  
LepideAuditor Client Client can be set up on all Windows operating systems as a server. It has been specifically designed to be managed by a network user. For example, the database administrator can be alerted when a user has failed to start the application. LepideAuditor Client Client is designed for easy maintenance. You have the option to configure your reports right from the main interface, without having to go into the b7e8fdf5c8

LepideAuditor for SQL Server is a comprehensive application designed to help you monitor SQL server databases and their activities. It enables database administrators to view and analyze all the changes and activities that take place in any registered server. The application is worth having when you want to view various server alerts, keep a record of server activities and ensure security of your organization's sensitive data. LepideAuditor for SQL Server Features: LepideAuditor for SQL Server for keeping a record of all the activities that take place in your database server and ensure security of your organization's sensitive data. LepideAuditor for SQL Server is a web-based application which can be accessed from any web browser. LepideAuditor for SQL Server is a very user-friendly and simple-to-use application. You don't have to install or configure any software on your client computer. It just works automatically when you start it. We have tried to provide the complete set of features that are available in most of the commercial monitoring applications. You will find that this is a complete and a comprehensive application. LepideAuditor for SQL Server includes all of the above features in a single, easy-to-use package. LepideAuditor for SQL Server includes all of the above features in a single, easy-to-use package. LepideAuditor for SQL Server provides a realistic view of your servers. It will provide you a close idea of how your server is performing along with alerts to help you tackle problems before they become a major issue. LepideAuditor for SQL Server monitors the resource, disk and CPU utilization on different server hardware components and alerts you to any performance problems. It will also record disk activity on your servers. With LepideAuditor for SQL Server you can generate reports on any given server. It will help you analyze the activity of any particular SQL Server along with the activities and performance of users and applications on that server. LepideAuditor for SQL Server has a reporting module and gives you a complete picture of the history of your SQL server. LepideAuditor for SQL Server will provide you with the information needed to determine if your SQL Servers are performing properly and what the performance issues are. LepideAuditor for SQL Server includes a web based interface. LepideAuditor for SQL Server is an easy-to-install application which doesn't

#### What's New In?

LepideAuditor for SQL Server is a comprehensive application designed to help you monitor SQL server databases and their activities. It enables database administrators to view and analyze all the changes and activities that take place in any registered server. The application is worth having when you want to view various server alerts, keep a record of server activities and ensure security of your organization's sensitive data. Monitor SQL Server databases: LepideAuditor for SQL Server monitors SQL server databases, logs and alert activities, and shows details of any new server you add. You can also add new databases to monitor. Monitor activities in the databases: - Transactions - DDL (create tables, indexes, views and stored procedures) - DML (insert, update and delete) - Log errors - Backups and restores - Options values Manage your servers: LepideAuditor for SQL Server makes it easy to manage your server usage. You can conveniently view and manage all the service packs and updates available for a registered server. For each service pack and update you choose to install or update the changes can be monitored. Activate or deactivate all the services running in a SQL server: By selecting the services from the drop-down menu, you can deactivate the services running in a SQL server without having to deregister them from the SQL server and your database. You can also deactivate all the services running in a SQL server without having to deregister them from the SQL server. For each registered server the administrator can also manage the options provided by Microsoft to enhance the performance of the server. By examining the details of each time a SQL server is logged to the server you are able to keep a track of how often data is entered or updated. Furthermore you can compare the data you see in the history against a set of previous data records. The administrator can configure the script to run under a scheduled basis and schedule it to run daily, weekly, monthly, yearly or on a particular time schedule. Also you can log the changes that occur in a SQL server using LepideAuditor for SQL Server. You can monitor the changes that have been made to the database or the login scripts. These changes can be compared against a set of previous data records and if you find a change that has not been recorded you can activate the scripts by clicking the update option. LepideAuditor for SQL Server features: LepideAuditor for SQL Server provides a great set
